

ELIMINATE Muck Weeds Algae

For more than 15 years, EverBlue Lakes has been committed to naturally restoring lakes back to pristine condition after toxic algae blooms. Our innovative whole-lake restoration technology has helped revive dozens of lakes across the country. **If your shoreline needs immediate relief, EverBlue DOCK™ Shoreline Aeration System is the clear solution for you.**

What is EverBlue DOCK?

A Revolutionary Aeration System for your Shoreline

- EverBlue DOCK is a patent pending jet aeration technology specifically designed for mucky shorelines, stagnant coves, canals and channels.
- Clear floating weeds and algae with the power of 1200 gallons per minute river-like circulation.
- Micro-bubble oxygenation rapidly dissolves the mucky compost pile on the bottom that feeds weed growth around your lakefront.

The EverBlue DOCK is a natural way to get rid of muck, allowing you to reclaim your property's shoreline, and improve the health of your lake.

Because of its all-natural approach, the EverBlue DOCK does NOT require a permit to install and use, making it easier than ever to get started.

START TODAY & Enjoy your Lakefront

DO I NEED EVERBLUE DOCK?

- Do you have 8 inches or more of "muck" at the end of your dock?
- Are you on the "weedy end of the lake" .
- Are you in a channel or cove with stagnant water and not enough exchange with the rest of the lake?
- Is your shoreline "socked-in" with weeds and algae – especially lily pads and/or "string algae"?

DID YOU KNOW?

- Lake muck is made up of dead weeds, leaves and debris that has fallen to the bottom.
- This organic muck is biodegradable. But it needs lots of oxygen!
- Oxygen stimulates "good bacteria" to literally "eat" organic bottom muck.
- You can combine EverBlue DOCK with beneficial bacteria treatment for an even faster result. Ask us how!
- Questions about your "muck". We can test it and make sure EverBlue DOCK is right for you!
